Good shelf life

Details about Black Currant Seed Oil

Description

Black currant seed oil is a special rarity. The dark, yellow-green oil has a product-typical lightly nutty taste and a special fatty acid composition.

Special Characteristics

Black currant seed oil has a high content of highly unsaturated alpha and gamma linolenic acid as well as the rare stearidonic acid.

Application Cosmetics

Black currant seed oil contains reaction-friendly and highly unsaturated fatty acids. The oil facilitates and activates skin metabolism and slows skin aging.

In cosmetics black currant seed oil is used for treating dry, inflammatory, mature and hyper-sensitive skin as well as dirty and acne-prone skin.

Black currant seed oil is popular for use in anti-aging products and facial oils.
